

We had made up a startup for CG ART for which We had done various interior projects. Let me Elaborate what actual CG artist do.

"As contemporary technology continues to develop, one area that has made big advancements is 3D modeling software. This lucrative and growing field allows CG artists to create fantastical characters, otherworldly environments and incredible visual effects that seem as if they are real."

As this startup is **4-5 months** old I had done almost **20 interior** projects and now I am keen to do it for the **Exterior and larger project** in which I am pretty confident for give you the Work you want. So I would love to introduce scope of work I will be happy to provide.

- **Visualisation for Architectural Interiors and Exterior elements.**
- **Walkthrough Video and Image Animations**

As mentioned above are the basic things which Everyone can expect from Their CG artist but along with that I also Work for Specific Product Visualisation and always keen to explore space and its elements with specific mood lights and texture effects.

So I am exited to work with you. I am also attaching some reference work in my portfolio for you reference. I hope you like it and revert me for further discussion regarding the work.

In lieu to your positive response.

With Regards,
Himani
